

# TEAM DARK ORCHID

Coal power plants, air  
pollution, and health  
outcomes

Quinn Bankson, Eric Leinweber, Paige Hathaway,  
& Betsy Norwood

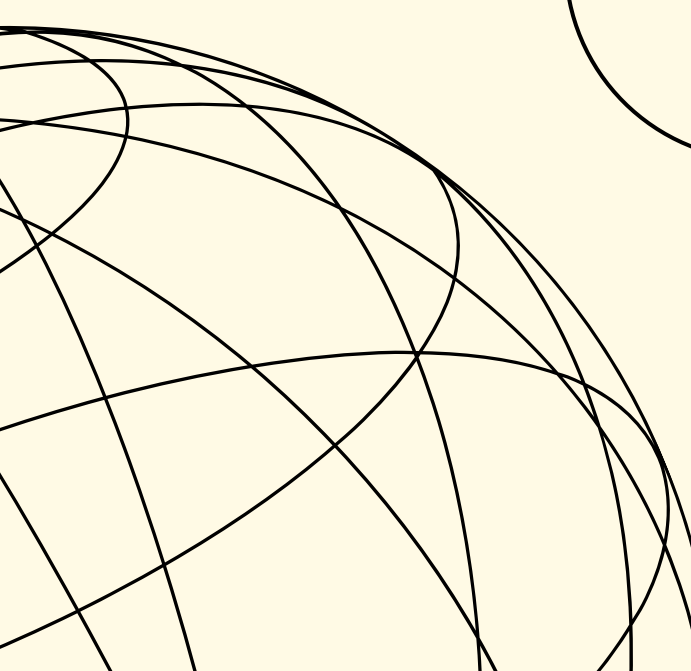

# Research Questions

**Does the proximity of coal fired power plants to county centroids exacerbate the effects of air pollutants on health outcomes in the continental U.S.?**

**How do these pollutants affect health outcomes in general?**

# The Data

- Source of data: EPA (air pollution) and Institute for Health Metrics and Evaluation (health outcomes)
  - Focus on continental U.S.
- Feature engineering to create "distance\_to\_nearest\_plant variable"
- Stringr to change health outcome variables from range to the average
- Missingness in AQI (Air Quality Index) variables

# The Variables

## *Health Variables*

- mortality from respiratory disease, lung disease, and asthma
- percent change from 1980-2014

## *AQI Variables*

- good days (0-50)
- moderate days (51-100)
- unhealthy for sensitive days (101-150)
- unhealthy days (151-200)
- very unhealthy days (201-300)
- hazardous days (301+)

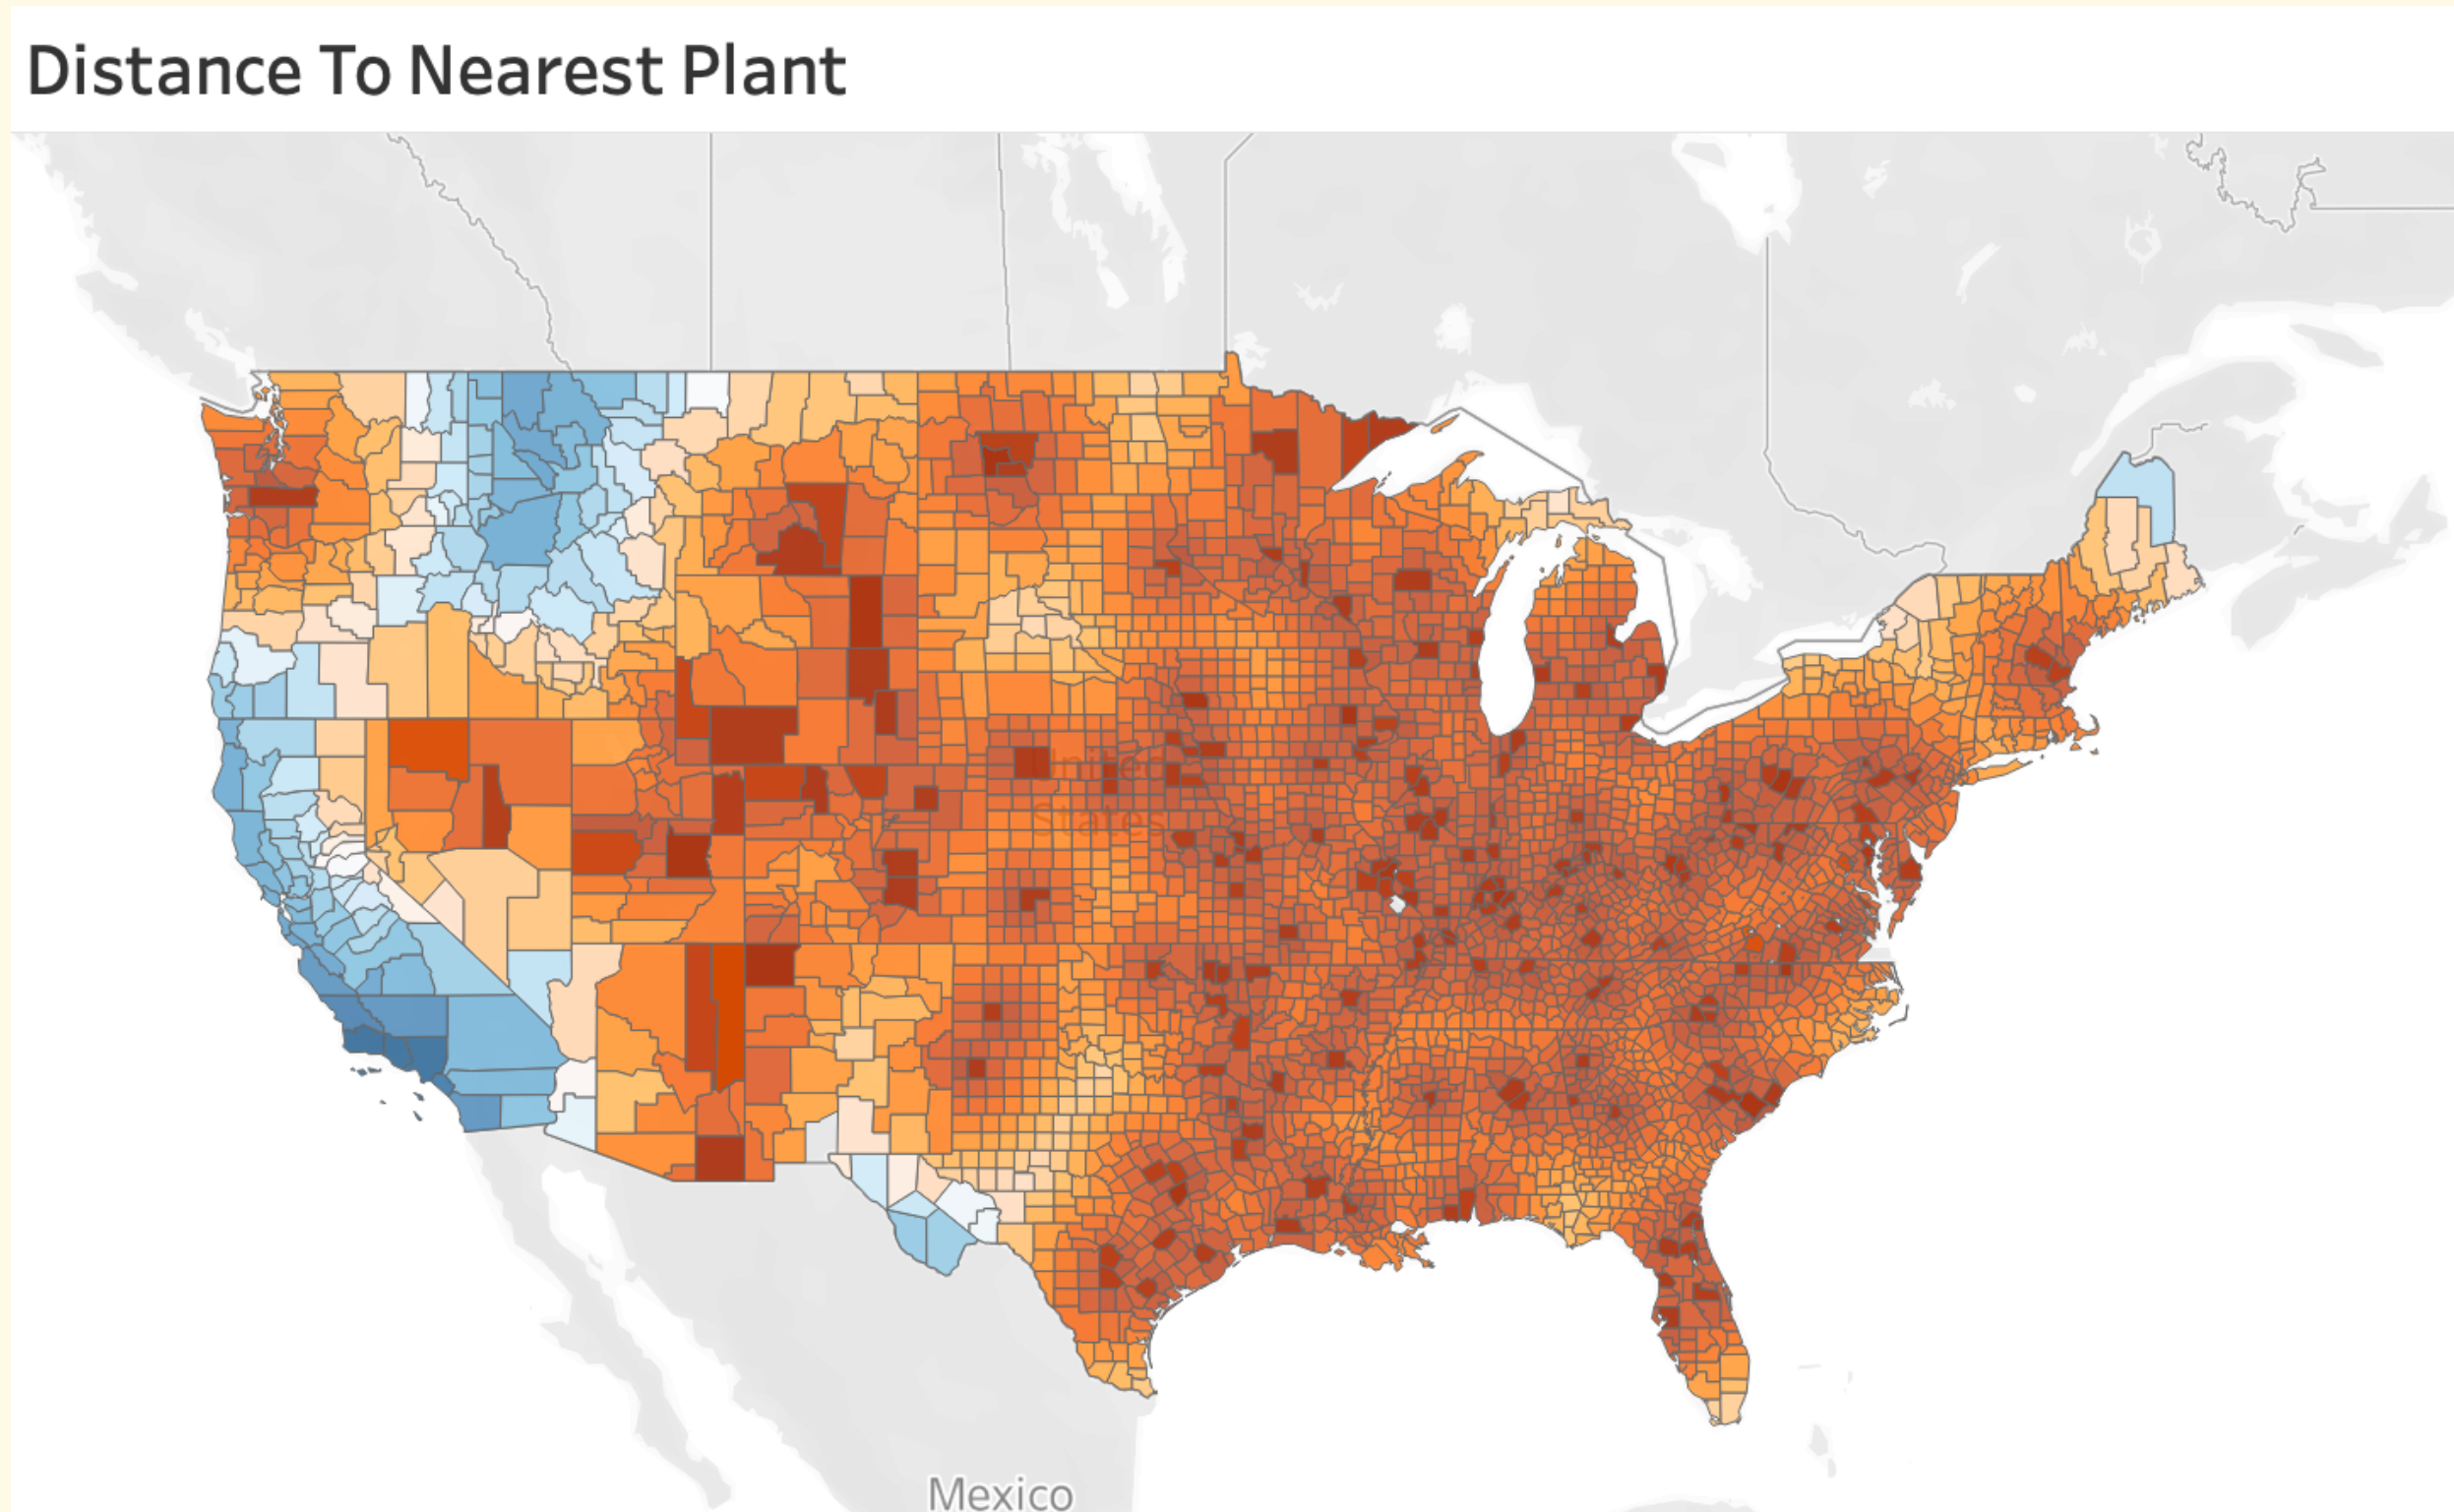

## *Other Variables*

- state
- distance\_to\_nearest\_plant
- median\_aqi

# Coal Plants Proximity

# Health Outcomes Tableau

Lung Mortality.

Asthma Mortality.

Respiratory Mortality.
